

Khoa Duong

*Product designer who designs and ships,
using AI and code to turn ideas into working interfaces.*

Experience

Product Designer—Vincere by Access Group ↗

Aug 2021—Jun 2026

- ✦ Designed features across a B2B “Recruitment OS”, a global ecosystem of web and mobile products for recruiters and candidates.
- ✦ Helped build and maintain the shared design system in Figma (Variables, Styles, Components, Variants, Auto-Layout), keeping many sub-products consistent as the team scaled.
- ✦ Partnered with PMs and front-end developers in Agile sprints, turning tickets and requirements into user flows, wireframes, prototypes, and production-ready designs.
- ✦ From 2025, replaced Figma prototypes with real coded micro-frontends built with AI (Claude), editing UI/UX directly in the codebase so features shipped faster.

Product Designer—TailorWing ↗

Feb 2020—Apr 2021

- ✦ Sole designer at an early-stage startup building a marketplace web app connecting tailors with customers (an “Uber/Airbnb for tailoring”), designed from concept to launch.
- ✦ Worked directly with the founder and developers with no fixed process. Ran market and competitor research to shape design decisions and owned the full design workload independently.

Vision Software Engineer—Emage Vision ↗

Apr 2019—Sep 2019

- ✦ Developed machine-vision algorithms in Halcon to automatically detect manufacturing defects in optical contact lenses on a production and quality-inspection line.
- ✦ Completed two weeks of specialist training in Singapore, building the technical foundation in logic and software that lets me prototype and ship in code today.

Education

- ✦ International University, VNU-HCM — Bachelor of Engineering, Electrical Engineering.
- ✦ Certifications: Google UX Design Certificate · UI/UX Design Specialization (CalArts) · Interaction Design Foundation (IxDF)

Skills

UX Research • AI Prototyping • Design Systems • AI-Native Workflow • Responsive Design
Figma • Notion • Azure DevOps • Claude • ChatGPT • HTML/CSS • SwiftUI
